polylinker; Site__1: Not I; Site__1: Soc Ri; The UI-R-GO
library is a normalized library constructed from a
mixture of rat tissues (nodose ganglia, dorsal root
ganglia, and tifgeminal ganglia). The tag is a string of
6 nucleotides present between the Not I site and the
0 ligo-dT track. The library was constructed as described
by Bonaldo, Lennon and Soares, Genome Research 6:
791-806, 1996."

                                                                                                                                   correct initiation codon. Where possible we choose an initiation codon (atg, gtg, ttg or (att)) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream initiation codon. If this cannot be the entire insert of the sequence clone. If may be shorter because we only sequence overlapping sections once, or longer, because we only sequence overlapping sections once, or longer, because we arrange for a small overlap between neighbouring submissions. Cosmid 9810 lies between 259 and 588 in the Asel-B genomic restriction fragment.

In 33320
prediction is based on positional base preference in codons using a specially developed Hidden Markow Model (Krogh et al., Nucleic Acids Research, 22(22):4768-4778 (1994)) and the FramePlot program of Bibb et al., Gene 30:157-66(1984) as implemented at http://www.nih.go.jp/

Submitted (25-APR-1999) Genome Sequencing Center, Washington University School of Medicine, 4444 Forest Park Parkway, St. MO 63108, USA
On Jun 5, 1999 this sequence version replaced g1:4680445.
* NOTE: This is a 'working traft' sequence. It currently a consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is
   gatccgctaccgagtggaggacagtgtggactggaaggtggtggacgatgtgagcaacca
                                                                      gacetectgeogeetggeoggeetgaaaceeggeacegtgtaettegtgeaagtgegetg
                                                                                                                                             18292 GGCCGCCAAGTGGCTGCCGCGCGGGGGCGGCTCGACCGCGGACTTCCTGTCCTACCC
                                                                                                                                                                                                                                                                                       arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                  13037: contig of 13037 bp in length
13054: gap of unknown length
183800: contig of 170746 bp in length.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  11

The length in codons is given for each CDS.

Usually the highest scoring match found by fasta -o is given for CDS which show significant similarity to other CDS in the database. The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon. Gene

un codons is given for each of these may be intraced; including the highest social match found by fasta -o is given for Usually the highest social match found by fasta -o is given for CDS which show significant similarity to other CDS in the database. The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon. Gene prediction is based on positional base preference in codons using a specially developed Hidden Markow Model (Krogh et al., Nucleic Acids Research, 22(22):4768-4778(1994) and the Frameplot program of Bibb et al., Gene 30:157-66(1984) as implemented at http://www.nih.go.jp/
jun/cgi-bin/frameplot.pl. CAUTION: We may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg, qtg, ttg or (att)) which is preceded by an upstream initiation codon. If this cannot be identified we choose the most upstream initiation codon. If this cannot be identified we choose the most upstream initiation codon. If this cannot be identified we choose the most sequence clone. It may be shorter because we only sequence overlapping sections once, or longer, because we arrange for a small overlapp with cosmids E63 and E39 on the Asel-E genomic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /note="Overlap with Streptomyces coelicolor cosmid StE63."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /note="SCE63.01, partial CDS, cdaPS3, CDA peptide synthetase III, len: >332aa; Constitutes the the majority of cdaPS3, CDA peptide synthetase III, part of the calcium-dependent antibiotic (CDA) biosynthetic cluster from Streptomyces coelicolor. CDA is a peptide antibiotic which is synthesised non-ribosomally by a putative multifunctional peptide synthetase enzyme. This partial

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated haemopoletin receptor - used for developing products for modulating proliferation, differentiation and survival of cells, e.g. neuronal cells and cells isolated haemopoletin receptor (HR). Interaction between the novel HR and a ligand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to regulate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis, e.g. for cancers or predisposition to cancers, or for drug screening.

e.g. meuronal cells

Claim 6; Page 90-92; 182pp; English.

The heamopoletin receptor (HR) NR6.3 is a form of the novel HR NR6.

Interaction between the novel HR and a ligand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to regulate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis, e.g. for cancers or predisposition to cancers, or for drug screening.

The Francian modulating products for modulating products for modulating proliferation, differentiation and survival of cells, per modulating proliferation, differentiation and survival of cells, per e.g. neuronal cells fast per sequence was generated by a SN RACE of brain CDNA using CC The nucleotide sequence was generated by a SN RACE of brain CDNA using CC The nucleotide sequence was generated by a SN RACE of brain CDNA using CC Interaction between the novel HR and a ligand facilitates proliferation, differentiation and survival HR and a ligand facilitates proliferation, differentiation and survival maintenance or regeneration in an array of configuration configuration, differentiation and survival in vivo. They can be present in the products used for modulating neuronal proliferation, differentiation cc and survival. The products can also be used for detection and diagnosis, sequence 834 BP; 167 A; 274 C; 225 G; 168 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

New Msolated haemopoietin receptor - used for developing products for modulating proliferation, differentiation and survival of cells, e.g. neuronal cells, e.g. neuronal cells, leading the property of the property of the novel HR NR6. The haemopoietin receptor (HR) NR6.1 is a form of the novel HR NR6. Interaction between the novel HR and a ligand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to regulate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis, e.g. for cancers or predisposition to cancers, or for drug screening. Sequence 1629 BP; 336 A; 541 C; 453 G; 299 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            v27140;

New nucleic acid encoding U4 haematopoietin receptor superfamily chain - potentially useful, e.g. for modulating call proliferation or immune response, for treating cancer and auto:immune disease Claim 1; pages 25-26; 38pp; English.
This is the nucleotide sequence encoding the murine U4 protein from the haematopoietin receptor superfamily, used in the method of the invention for the modulation of call proliferation, or the immune response. Transformed mammalian calls are used to produce recombinant U4 protein. The U4 protein is used to screen for specific binding agents, raise antibodies. It is also used as reagents for assays and as tissue markers for isolation of cognate ligands and receptors, and in pharmaceutical compositions which may modulate cell proliferation, cell differentiation, and the immune system (e.g. for treating immune cell differentiation).

New isolated haemopoletin receptor - used for developing products for modulating proliferation, differentiation and survival of cells, e.g. neuronal cells, e.g. neuronal cells, and included cells, 182pp; English.

The haemopoletin receptor (HR) NR6.2 is a form of the novel HR NR6. Interaction between the novel HR and a ligand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and it's darivatives can be used for modulating the activity of the receptors e.g. to regulate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for differentiation and survival. The products can also be used for differentiation and survival. The products can also be used for drug screening. Sequence 1673 BP; 544 A; 550 C; 474 G; 505 T;

The present sequence encodes a protein designated Zcytor5, which is caytokinin-like receptor. Soluble Zcytor5 may be administered to caynor-regulate the effects of a growth and/or maintenance factor in thyrold, heart, and skeletal muscle for example to lessen the effect of cardiotrophin-l on cardiac pathologies, so preventing heart on cardiac pathologies, so preventing heart candiagement. Zcytor5 could be used to detect cardiotrophin-l in the blood, and to discover other possible Zcytor5 ligands. A probe on chromosome 19. Antibodies and the and integrity of the Zcytor5 gene on chromosome 19. Antibodies and the candidity Zcytor5 ilgand effects.

The presence of the zcytor5 proper or thromosome 19. Antibodies and the cardiac antibody could be used to purify Zcytor5 and sequence 1724 BP; 350 A; 550 C; 500 G; 324 T;

Transformed mammalian cells are used to produce recombinant U4 protein. The U4 protein is used to screen for specific binding agents, raise antibodies. It is also used as reagents for assays and as tissue markers for isolation of cognate ligands and receptors, and in pharmaceutical compositions which may modulate cell proliferation, cell differentiation, and the immune system (e.g. for treating immune deficiency, inherited or the result of infection, autoimmune diseases, sequence 1579 BP; 304 A; 535 C; 473 G; 267 T;

The present sequence encodes a protein designated Zcytor5, which is the present sequence encodes a protein designated Zcytor5, which is sequence encodes a protein designated to adversely the receptor. Soluble Zcytor5 maintenance factor in syroid, heart, and skeletal muscle for example to lessen the effect for andiotrophin-1 on cardiac pathologies, so preventing heart largement. Zcytor5 could be used to detect cardiotrophin-1 in the lood, and to discover other possible Zcytor5 ligands. A probe and integrity of the Zcytor5 gene on chromosome 19. Antibodies and the integrity of the Zcytor5 gene on chromosome 19. Antibodies and the raleidotypic antibody could be used to purify zcytor5 and arrapeutically to modify Zcytor5 ligand effects.

The present sequence encodes an allelic varaint of protein designated

CC Zoytor5, which is a cytokinin-like receptor. Soluble Zoytor5 may be

CC Zoytor5, which is a cytokinin-like receptor. Soluble Zoytor5 may be

CC dactor in thyroid, heart, and skeletal muscle for example to lessen the

CC dactor in thyroid, heart, and skeletal muscle for example to lessen the

CC dactor of cardiotrophin-1 on cardiac pathologies, so preventing heart

CC blood, and to discover other possible Zoytor5 ligands. A probe

CC comprising Zoytor5 DNA or RNA can be used to determine the presence

CC and integrity of the Zoytor5 gene on chromosome 19. Antibodies and the

CC anti-idiotypic antibody could be used to purify Zoytor5 and

thiotypic antibody could be used to purify Zoytor5 and

the complexity of the Zoytor5 gene of promity Zoytor5 and

CC anti-idiotypic antibody could be used to purify Zoytor5 and

therapeutically to modify Zoytor5 ligand effects.

Soluble Zoytor5 may be administered to down-regulate the effects of a growth and/or maintenance factor in thyroid, heart, and skeletal muscle for example to lessen the effect of cardiotrophin-1 on cardiac pathologies, so preventing heart of cardiotrophin-1 on cardiac pathologies, so preventing heart blood, and to discover other possible Zoytor5 ligands. A probe and integrity of the Zoytor5 gene on chromosome 19. Antibodies and therapeutically to modify Zoytor5 ligand offects, and therapeutically to modify Zoytor5 ligand offects.

Claim 9; F1g 3; 182pp; English.
The NR6 protein is a novel Haemopoletin receptor (HR). Interaction
between the novel HR and a ligand facilitates proliferation,
differentiation and survival of a wide variety of cells. The HR and it's
derivatives can be used for modulating the activity of the receptors e.g.
to regulate development, maintenance or regeneration in an array of
different cells and tissues in vitro and in vivo. They can be present in
therapeutics used for modulating neuronal proliferation, differentiation
and survival. The products can also be used for detection and diagnosis,
e.g. for cancers or predisposition to cancers, or for drug screening.

The NRG gene encodes a novel Heamopoletin receptor (HR). Interaction between the novel HR and a ligand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and it's products can be used for modulating the activity of the receptors e.g. to requiret development, maintenance or regeneration in an array of aliferent cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis, e.g. for cancers or predisposition to cancers, or for drug screening. Sequence 6663 BP; 1462 A; 1852 C; 1715 G; 1634 T;
